Press Release

Biophytis to Present at the 15th International Congress of the European Geriatric Medicine Society in Krakow, Poland

Paris (France), Cambridge (Massachusetts, United States), September 26, 2019, 8:00 AM CEST - Biophytis SA (Euronext Growth Paris: ALBPS), a clinical-stage biotechnology company focused on the development of drug candidates for the treatment of age-related diseases, announces that Waly Dioh, VP Clinical Development, will make a presentation titled, "*Evaluation of Safety and Efficacy of BIO101, a Mas Receptor Activating Drug for Sarcopenia: A Double-blind, Placebo Controlled, Randomized Clinical Trial*" at the 15th International Congress of the European Geriatric Medicine (EuGMS). The Congress is taking place between 25th and 27th September 2019 in Krakow, Poland.

Biophytis' clinical development plan for Sarconeos (BIO101) for the treatment of sarcopenia comprises:

- SARA-PK, a Phase 1 clinical trial that showed safety and tolerability in older healthy volunteers. The trial completed in 2017.
- SARA-OBS, an observational trial that was completed in Q2 2019 with the last patient out, and
- SARA-INT, an ongoing international Phase 2b trial with a 6-month follow-up period that is currently recruiting patients in the US and Europe. The primary endpoint of the study is the 400-meter walking test gait speed.

In his presentation Mr. Dioh will:

- Outline the SARA-OBS study, which was designed to characterize, pre-recruit and confirm the optimal patient population for the SARA-INT trial, and
- Provide data on the preliminary baseline characteristics and changes from baseline of the first set of SARA-OBS patients.

In addition, insights on the SARA-INT recruitment strategies, including inclusion criteria, as well as the baseline characteristics of the first patients, will be discussed.

The presentation will be made today at 2:30 PM CEST.

About Sarconeos (BIO101)

Biophytis's lead drug candidate, Sarconeos (BIO101), is an orally administered small molecule for the treatment of neuromuscular diseases. Sarconeos (BIO101) is a plant-derived pharmaceutical-grade purification of 20-hydroxyecdysone. Pre-clinical studies have shown that (Sarconeos) BIO101 stimulates biological resilience through activation of the MAS receptor, which suggests preservation of muscle strength, function and mobility in various muscular wasting conditions. Biophytis is currently testing Sarconeos (BIO101) in a global, randomized, multicenter, double-blind, placebo-controlled Phase 2b clinical trial (SARA-INT) on patients with sarcopenia, a disease of ageing characterized by a loss of muscle mass, strength and function in elderly people leading to mobility disabilities, an increased risk of adverse health events and potential death.

About Biophytis

Biophytis is a clinical-stage biotechnology company focused on developing therapeutics that slow the degenerative processes associated with aging and improve functional outcomes for patients suffering from age-related diseases, with a primary focus on neuromuscular diseases.

Biophytis' lead drug candidate, Sarconeos (BIO101), is an orally administered small molecule, which is currently in a Phase 2b clinical trial for sarcopenia (SARA-INT) in the US and Europe. Sarconeos (BIO101) is also being developed for the treatment of Duchenne muscular dystrophy (DMD). Biophytis expects Sarconeos (BIO101) to be ready to enter the clinic for DMD in 2020.

Biophytis is headquartered in Paris, France, and has offices in Cambridge, Massachusetts. The Company's ordinary shares are listed on Euronext Growth Paris (Ticker: ALBPS - ISIN: FR0012816825). For more information please visit www.biophytis.com.
